

# Asheville Region's Transmission Need

Over the past 20 years, the Asheville region has grown and so has the need for reliable energy. That's why we're making important energy grid improvements to reliably power the homes, schools, hospitals and businesses in this region now and in the years ahead. The Craggy-Enka Reliability Project is an important part of our plan to improve service to customers, upgrading 9 miles of transmission lines along an existing right of way.

**The Craggy-Enka Reliability Project** will improve reliability, expand energy capacity in the area, and help to enable a cleaner energy future for the region and the state.

BUILDING A SMARTER ENERGY FUTURE®

# Community Benefits

Duke Energy has a long-standing commitment to the Asheville region and is dedicated to delivering energy that customers can count on every time they flip the switch.

## The Craggy-Enka Reliability Project will:

Meet growing energy demand in the region

Reduce outages and strengthen reliability

Minimize impact using existing right of way

Help promote cleaner sources of energy

We are committed to helping build a strong economic foundation for western North Carolina upon a reliable, secure and increasingly clean energy infrastructure.
